

# SRAM CASSETTES AND CHAINS

## THE RIGHT GEAR FOR EVERYONE

The cassette is often the last piece considered in the drivetrain puzzle, but it's of primary importance. The right cassette, paired with the SRAM XX1, X0, X9, X7 or X5 short, mid, or long-cage rear derailleur, delivers ultra-fast, smooth and quiet shifts. SRAM offers a range of efficient, lightweight and durable cassettes produced with ideal materials and manufactured through quality processes.

The right cassette choice will make the difference for the perfect ride. SRAM has developed cassettes that work perfectly for all levels of mountainbiking, with ratios for downhillers, cross country racers and all mountain enthusiasts. Whether you have a 1X, 2X10 or 3X10 system, SRAM cassettes provide optimal gearing solutions and are optimized for best performance, when matched with SRAM drivetrain components.

### SRAM XG-1199

#### THE XX1 CASSETTE

Ranging from 10- to 42-teeth, the 11-speed X-DOME™ delivers an incredibly wide gear range while maintaining even, optimized steps. The single-unit cassette combines with the XD™ driver body for a superior connection to the wheel.

**Weight: 260g**

**Available in: 10-42**

**(gearsteps: 10, 12, 14, 16, 18, 21, 24, 28, 32, 36, 42)**

### SRAM XG-1099

#### THE PERFECT MATCH TO XX

The revolutionary machined design of the X-DOME XX cassette is CNC-machined together out of a single block of billet steel, creating an incredibly lightweight, precise and strong cassette. The open design aids in mud clearance, giving you cleaner shifting performance and longer component life.

**Weight: 185g (11-32)**

**Available in: 11-32 / 11-36**

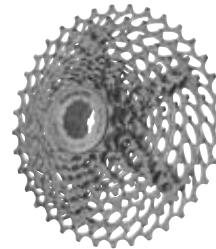

### SRAM XG-1080

#### THE X0 CASSETTE

The 11-36 XG 1080 is the perfect complement to an X0 drivetrain. At under 240 grams, it's light, but that's just the beginning. The XG 1080 uses a hybrid construction that allows us to make this cassette without a spider, similar to the XX XG-1099. The XG-1080 cogs are individually made, helping achieve high performance, low weight, and great value.

**Weight: 239g**

**Available in: 11-36**

### SRAM PG-1070

#### THE X9 CASSETTE

The PG-1070 cassette's semi-spidered design maintains a high level of shifting performance. Our cogset features a semi-spidered construction for a maximum stiffness to weight ratio and is available in 12 optimized configurations to best match a wide variety of uses. To help you in the toughest climbs it is now available in the 12-36 ratio.

**Weight: 290g (11-32)**

**Available in: 11-23 / 11-25 / 11-26 / 11-28 / 11-32 / 11-36 / 12-25 / 12-26 / 12-27 / 12-28 / 12-32 / 12-36**

### SRAM PG-1050

#### THE X7 CASSETTE

The PG-1050 cassette benefits from SRAM's long history and expertise in developing cassettes. With its simple and reliable construction, it is the perfect cassette for the SRAM X5 rider; and great value for your money.

**Weight: 299g (11-32)**

**Available in: 11-23 / 11-26 / 11-28 / 11-32 / 11-36 / 12-25 / 12-26 / 12-27 / 12-28 / 12-32 / 12-36**

### SRAM PG-1030

#### THE X5 CASSETTE

The PG-1030 cassette offers an innovative approach to 10 speed cassette design. Our cassette performance is optimized by material choice, tooth profile and shift ramp design for quick and positive index shifting.

**Weight: 302g (11-32)**

**Available in: 11-26 / 11-28 / 11-32 / 11-36**

# SRAM CASSETTES AND CHAINS

## CHAINS

SRAM's chains have been developed along with our cassettes to provide optimum performance under any conditions, working as a system for smooth, quiet, and precise shifting. All of our chains use lightweight materials, with proven durability, with a strict quality standard. They all feature our PowerLock technology. PowerLock is a tool free, convenient and consistent way to connect our 10 and 11 speed chains.

### SRAM PC-XX1

#### THE XX1 11 SPEED CHAIN

The XX1 chain represents the latest breakthrough in a long line of precise, light-weight chains from SRAM. It's designed to deliver the greatest strength and reliability to a drivetrain that doesn't have to make compromises for front shifts.  
**Weight: 252g (114 links)**

### SRAM PC-1091R

#### THE XX CHAIN

SRAM PC-1091R series chains feature hollow pin construction and outer plates with lighting holes for weight savings with no sacrifice of strength. Lightweight, smooth, precise-shifting. A true high-performance product.  
**Weight: 255g (114 links)**

### SRAM PC-1091

#### THE XO CHAIN

The PC-1091 chain offers more heavily chamfered outer plates for improved shifting and quieter running. Other advancements include a new inner plate finish plus chrome hardened pin construction, both for longer chain life.  
**Weight: 257g (114 links)**

### SRAM PC-1071

#### THE X9 CHAIN

SRAM'S Power Chains feature the PowerLock connecting link — the only secure toolless attachment device for a sub 6mm chain in today's market  
**Weight: 264g (114 links)**

### SRAM PC-1051

#### THE X7 CHAIN

SRAM continues to innovate the chains that continue to win races around the world. The PC-1051 10 speed PowerChain featuring the PowerLock connecting link provides smooth, precise shifting and weight savings.  
**Weight: 277g (114 links)**

### SRAM PC-1031

#### THE X5 CHAIN

Simply stronger. The PC-1031 chain benefits from new design for better performance.  
**Weight: 277g (114 links)**
